# TACOMA COMMUNITY COLLEGE NATURAL AREA & LIVING LABORATORY

The TCC Natural Area is a living laboratory that provides important habitat for birds, frogs, coyotes and other wildlife. Community members are welcome to visit the TCC Natural Area. We invite you to help us care for this space by following the posted guidelines.

Tacoma Community College manages the TCC Natural Area to:

- Provide a natural area** for hands-on experiences for students in botany, art, geography, anthropology, history and other disciplines.
- Protect natural resources**, specifically wetlands and the flora and fauna dependant on wetlands.
- Protect ecosystem benefits** associated with forests and wetlands such as carbon sequestration and groundwater infiltration.
- Provide the safe and responsible use of trails** by the campus community and neighbors.
